We are innovation rebels: permanent beta. — Sven Erni, founder

YOUR EXTENDED TEAM

Driven by innovation for beautiful, yet functional design addressing today's environmental and social challenges, we strive to be the rebels who tirelessly think one step ahead to develop sustainable acoustic solutions for the design industry: permanent beta.

At IMPACT ACOUSTIC® we specialize in turning single-use materials into high-quality finished products for acoustic comfort. We understand how

Environmental Social Governance (ESG) matters to the new generation of international design practitioners and we want to give them all the tools to address acoustic challenges.

In addition to a wide and customizable array of products, we specialize in bespoke solutions. A network of creative application engineers, product designers and architects translate your ideas into a tangible product.

Sven Erni & Jeffrey Ibañez
Founders

Following a great success in their own careers in architecture and interior design in Asia and Europe for more over a decade, their passion for design and innovation created a new era in acoustic solutions where design meets sustainable development goals.

An Idea, no matter how silly it may sound, drives thinking. Thinking inspires change.

— Jeffrey Ibañez, founder

ACOUSTIC ADVISORY

The elements used to optimize acoustic well-being must have the right performance and support your design intent - whether classic or modern, purist or opulent, with subtle touches or bold colours, discreet or eye-catching. We help you to solve acoustic challenges while meeting your design goals and budget.

PLANNING + NESTING OPTIMIZATION

In the design phase, too little attention is paid to the efficient planning of our material and a high level of cut-offs automatically results in increased costs of the same magnitude. We use specialized tools to help you minimize material wastage in your projects through optimized cutting plans according to your specifications.

PARAMETRIC DESIGN

We do not draw but program your individual ideas. This approach delivers unique and sophisticated designs that perfectly meet your requirements. We combine unique expertise in the field of computational-aided design and of digital manufacturing with a deep understanding of the craftsmanship and knowledge of materials. We create unique designs according to your ideas and budget.

PROTOTYPING & DIGITAL MANUFACTURING

We help develop prototypes into a tangible working product across industries. We combine the latest technology and high-precision cutting centres with wide knowledge of highly qualified application engineers and product designers who have amassed expertise across a broad range of industries. Getting IMPACT ACOUSTIC® involved at the beginning accelerates the process of a new design project.

WAVE SINE

ACOUSTIC CEILINGS

Acoustic ceilings offer the largest possible surface area for soundproofing. Our standard and bespoke solutions allow acoustic well-being to be controlled in a creative and effective way. Let's talk about your individual design ideas.

INNOVATION

IMPORTANCE OF LIGHT

Lighting in the workplace impacts employee performance. It influences cognitive performance and problem-solving abilities and can also improve our mood and interpersonal relationships at work, resulting in better job satisfaction: happy employee, happy company!

We offer the best performance of any linear workplace lighting fully integrated into our acoustic sails. In addition, our latest innovation presents a revolutionary low-glare technology to create bright ceilings without noticing the source of light. Simply beautiful!

Bartenbach

PSYCHOLOGY OF COLOUR

Most people recognize that the state of their working environment can make them feel enthusiastic or tired. However, they may not realize the impact colour used at work can have on their emotions in other ways. Certain colours may leave them uninspired, while others can help them feel energetic, relaxed or creative.

Green and blue – These colours can create feelings of peace of mind and relaxation in employees. **Yellow**, the colour of caution, can cause eye strain by over-stimulating the eyes in a workplace. This can annoy and irritate employees. **Red** – This colour can stimulate and excite employees.

SUSTAINABILITY

PIONEERING THE WAR AGAINST SINGLE-USE PLASTIC

Dematerialisation, recycling, upcycling and life cycle management are the foundation of our products and services. Our next big step is to develop products from our production waste through circular design principles. All our products are Cradle to Cradle Certified and LEED v4 accredited.

100% SOCIAL

In the fight against the use of single-use plastics, we support the global Trash Hero movement, providing experiential education on the environmental impact of waste, promoting practical solutions to mitigate, prevent and avoid the same.

We work closely with handicapped professionals and develop solutions that we use in our products and services.
